Latitude/Longitude Map	4
<i>(Grades 6-8) Name the country/province at each listed latitude/longitude.</i>	
Grid Map	11
<i>(Grades 2-5) Name the country/province at each listed grid location.</i>	
Blank Map	20
<i>(Grades 2-8) A blank map. Younger grades can color it in, older grades can use as quiz for them to label the correct names.</i>	
Labeled Map	21
<i>(Grades 2-8) Use this labeled map as an answer key or coloring page</i>	
Map Colored In	22
<i>Example of a map that has been colored in.</i>	
Focus on One Region	23
<i>(Grades 3-8) Highlights selected regions in the map.</i>	
Heat Map	67
<i>(Grades 3-8) Create a heatmap (choropleth) representation.</i>	
Flashcards	73
<i>(Grades 2-6) Pages to cut out into flashcards of the regions in the map.</i>	
Crossword Puzzle	84
<i>(Grades 5-8) A crossword puzzle with clues to guess which country/province to fill in across or down.</i>	
Missing Vowels	96
<i>(Grades 4-8) Fill in the vowels for each country/province. Surprisingly good way to check spelling knowledge.</i>	
Word Scramble	97
<i>(Grades 2-5) Unscramble the name of the country/province. Two versions, with a harder version for the higher grades.</i>	
Cryptograms	113
<i>(Grades 3-7) Decipher the code!</i>	
Word Search	123
<i>(Grades 2-6) A word search puzzle. Two versions, with a harder version for the higher grades.</i>

Teacher Guide to Heat Maps

Heat maps in geography education serve as a powerful visualization tool for students in grades 2-8, enabling them to intuitively grasp spatial patterns by representing data density through color intensity. Often referred to in educational contexts as choropleth maps, these tools translate abstract statistical information-such as population distribution, weather phenomena, or wildlife sightings-into a tangible spectrum where 'warm' colors denote high concentrations and 'cool' colors signify scarcity. By removing the need to interpret complex bar graphs or raw numerical tables, these maps allow teachers to facilitate immediate classroom discussions on why certain features cluster in specific locations, effectively bridging the gap between basic map reading and the foundational concepts of spatial analysis and human-environment interaction.

3rd to 4th Grade: Introduction to Spatial Patterns

At this stage, students are learning to read basic map keys and categorize information. The focus should be on simple datasets with only 3-4 categories (e.g., 'high,' 'medium,' 'low' population density).

Activity: Color-coding counties or states using a simple progression (e.g., light green to dark green).

Focus: Understanding that one color represents a range of numbers rather than a single value.

5th to 6th Grade: Data Grouping and Analysis

Students here can handle more complex datasets and are beginning to understand fractions and intervals. They are ready to create their own "bins" for data.

Activity: Deciding where to set the breaks for their data (e.g., 0-1,000, 1,001-5,000, 5,001+).

Focus: Recognizing how changing the intervals changes the "story" the map tells.

7th to 8th Grade and Above: Quantitative Accuracy

At the middle and high school levels, students should focus on the ethics and accuracy of data representation. They can incorporate more complex statistics like population per square mile rather than raw totals.

Activity: Using real-world census data to create choropleth maps using more sophisticated color gradients (sequential vs. diverging scales).

Focus: Analyzing how map projections and data normalization affect the viewer's perception.
